

**Unit 5: Linear Functions Review**

What you need to know & be able to do	Things to remember	Examples																							
<p>1. Calculate the slope (rate of change)</p>	<p>“slope”</p> $m = \frac{y_2 - y_1}{x_2 - x_1}$ <p>Change in y Change in x</p>	<p>a. Calculate the slope. Then write the equation of the line.</p>	<p>b. Calculate the rate of change between the following points on a line.</p> <p>(0, -4) &amp; (-3, 11)</p>																						
		<p>c. Calculate the slope.</p> <table border="1" data-bbox="573 940 992 1205"> <thead> <tr> <th>x</th> <th>y</th> </tr> </thead> <tbody> <tr> <td>-1</td> <td>13</td> </tr> <tr> <td>0</td> <td>-2</td> </tr> <tr> <td>4</td> <td>-62</td> </tr> <tr> <td>10</td> <td>-152</td> </tr> </tbody> </table>	x	y	-1	13	0	-2	4	-62	10	-152	<p>d. Calculate the slope.</p>												
x	y																								
-1	13																								
0	-2																								
4	-62																								
10	-152																								
<p>2. Calculate the y-intercept</p>	<p>Point where graph crosses y-axis</p> <p>(0, b)</p>	<p>a. Name the y-intercept:</p> <table border="1" data-bbox="557 1402 954 1493"> <tbody> <tr> <td>x</td> <td>0</td> <td>1</td> <td>3</td> <td>4</td> </tr> <tr> <td>y</td> <td>8</td> <td>6</td> <td>2</td> <td>0</td> </tr> </tbody> </table>	x	0	1	3	4	y	8	6	2	0	<p>b. Name the y-intercept:</p> <table border="1" data-bbox="1198 1497 1382 1944"> <thead> <tr> <th>X</th> <th>Y</th> </tr> </thead> <tbody> <tr> <td>2</td> <td>3</td> </tr> <tr> <td>5</td> <td>9</td> </tr> <tr> <td>6</td> <td>11</td> </tr> <tr> <td>8</td> <td>15</td> </tr> <tr> <td>10</td> <td>19</td> </tr> </tbody> </table>	X	Y	2	3	5	9	6	11	8	15	10	19
x	0	1	3	4																					
y	8	6	2	0																					
X	Y																								
2	3																								
5	9																								
6	11																								
8	15																								
10	19																								

<p>3. Graph a linear function</p>	<p><math>y = mx + b</math></p> <p>*Always graph the y-intercept first and then use slope to determine next point.</p> <p>HOY VUX</p>	<p>a. Graph: <math>f(x) = -\frac{2}{3}x + 6</math></p> 	<p>b. Graph: <math>-4x + 2y = 12</math></p> 
		<p>c. Graph <math>x = -3</math>. Name slope &amp; y-intercept</p> 	<p>d. Graph <math>y = 4</math>. Name slope &amp; y-intercept.</p> 
<p>4. Convert from standard to slope intercept form</p>	<p>Slope Intercept: <math>y = mx + b</math></p> <p>Standard: <math>Ax + By = C</math></p>	<p>a. Solve for y: <math>4x + 2y = 8</math></p>	<p>b. Determine the slope and y-intercept: <math>3x - 6y = -12</math>.</p>
<p>5. Write the equation of a line.</p>	<p><math>y = mx + b</math></p>	<p>a. Write the equation of the line that has a slope of <math>-\frac{1}{2}</math> and contains the point (4, 6).</p>	<p>b. Write the equation of the line that contains the points (-2, 2) and (2, -6).</p>

c. Write the equation of the line that has a slope of 5 and y-intercept at (0, 3).

d. Write the equation of the line the corresponds to the following table:

x	2	4	6	8
y	-6	-4	-2	0

e. Write the equation of the line:

f. Write the equation of the line:

g. Write the equation of the line:

h. Write the equation of the line:
