

Unit 7 Systems of Equations Unit Review

What you need to know & be able to do	Things to remember	Examples																													
<p>1. Solve a system of linear equations by graphing.</p>	<p>Make sure each equation is solved for y.</p> <p>Graph both equations and find where they intersect.</p>	<p>1. Solve the system.</p> $y = 2x + 3$ $y = 2x - 5$ 	<p>2. Solve the system.</p> $x = y - 8$ $y = -x$ 																												
		<p>3. Solve the system of equations.</p> <table border="1" data-bbox="667 1020 1073 1209"> <thead> <tr> <th>x</th> <th>$y = x - 4$</th> <th>$y = -x$</th> </tr> </thead> <tbody> <tr> <td>0</td> <td>-4</td> <td>0</td> </tr> <tr> <td>1</td> <td>-3</td> <td>-1</td> </tr> <tr> <td>2</td> <td>-2</td> <td>-2</td> </tr> <tr> <td>3</td> <td>-1</td> <td>-3</td> </tr> </tbody> </table>	x	$y = x - 4$	$y = -x$	0	-4	0	1	-3	-1	2	-2	-2	3	-1	-3	<p>4. Solve the system of equations.</p> <table border="1" data-bbox="1120 1020 1526 1241"> <thead> <tr> <th>x</th> <th>$y = \frac{2}{5}x$</th> <th>$y = -x - 7$</th> </tr> </thead> <tbody> <tr> <td>-10</td> <td>-4</td> <td>3</td> </tr> <tr> <td>-5</td> <td>-2</td> <td>-2</td> </tr> <tr> <td>0</td> <td>0</td> <td>-7</td> </tr> <tr> <td>5</td> <td>2</td> <td>-12</td> </tr> </tbody> </table>	x	$y = \frac{2}{5}x$	$y = -x - 7$	-10	-4	3	-5	-2	-2	0	0	-7	5
x	$y = x - 4$	$y = -x$																													
0	-4	0																													
1	-3	-1																													
2	-2	-2																													
3	-1	-3																													
x	$y = \frac{2}{5}x$	$y = -x - 7$																													
-10	-4	3																													
-5	-2	-2																													
0	0	-7																													
5	2	-12																													
<p>2. Solve a system of linear equations using substitution.</p>	<p>Use only when one variable is isolated</p>	<p>5. Solve the system.</p> $y = -5x + 9$ $10x - 7y = -18$	<p>6. Solve the system.</p> $y = -8x - 16$ $y = 3x - 5$																												

<p>3. Solve a system of linear equations using elimination.</p>	<p>To eliminate a variable using addition or multiplication one coefficient must be positive and one must be negative.</p>	<p>7. Solve the system. $x - y = 11$ $2x + y = 19$</p>	<p>8. Solve the system. $4x = 20 - 8y$ $-4x + 2y = -30$</p>
		<p>9. Solve the system. $2x + 3y = 12$ $5x - y = 13$</p>	<p>10. Solve the system. $-3x - 8y = 0$ $-2x - 10y = 14$</p>
<p>4. Special Types of Systems</p>	<p>No Solution:</p> <ul style="list-style-type: none"> • False Equations • Slopes are the same • Y-intercepts are different • Parallel Lines <p>Infinite Solutions:</p> <ul style="list-style-type: none"> • True Equations • Equations are the same • One Line 	<p>11. Solve the system: $y = 2x - 2$ $-2x + y = 1$</p>	<p>12. Solve the system: $-9x - 3y = -18$ $3x + y = 6$</p>

5. Systems with Real World Scenarios	<p>Define your variables</p> <p>Determine if slope intercept or standard form is best</p> <p>Set up your equations and solve using elimination or substitution.</p> <p>Break Even Point: where the cost equal the income</p>	<p>13. One high speed internet provider has a \$50 set up fee and costs \$30 per month. Another provider has no set up fee and costs \$40 per month. In how many months will both providers costs the same? What will that cost be?</p>	<p>14. Sam spent \$24.75 to buy 12 flowers for his mother. Roses cost \$2.50 each and daisies costs \$1.75 each. How many of each flower type did he purchase?</p>
		<p>15. Explain what a break-even point is.</p> <p>What will the income and cost always be at the break-even point?</p> <p>What is the profit at the break-even point?</p>	<p>16. As a fundraiser for a band trip, AHS plans to sell hats with the school logo. The company producing the hats charges \$240 for the design and set up plus \$8 per hat. The band members will sell the hats for \$12 each. What is the break-even point? What will the cost and income be?</p>

Multiple Choice Practice

17. Taxi Company A charges \$4 plus \$0.50 per mile. Taxi Company B charges \$5 plus \$0.25 per mile. Which system best represents this problem?

(a) $Y = 4x + 0.5$
 $Y = 5x + 0.25$

(c) $Y = 0.5x + 4$
 $Y = 0.25x + 5$

(b) $Y = 4x + 0.25$
 $Y = 5x + 0.5$

(d) $Y = 0.5x + 5$
 $Y = 0.25 + 4$

18. The Fun Guys game rental store charges an annual fee of \$5 plus \$5.50 per game rented. The Game Bank charges an annual fee of \$60 for unlimited game rentals. For how many game rentals will the cost be the same at both stores? What is the cost?

- (a) Month 4; \$27
 (b) Month 10; \$60
 (c) Month 8; \$49
 (d) Month 14; \$82

19. Solve the system of equations:

$$4x - 4y = -16$$

$$x - 2y = -12$$

- (a) (8, -4)
 (b) (-2, 4)
 (c) (4, 8)
 (d) (4, -8)

20. The graph to the right shows the cost of two phone plans. How many minutes does a person need to call each month so that Plan B is the less expensive plan to use?

- (a) Less than 10 minutes
 (b) Less than 40 minutes
 (c) More than 40 minutes
 (d) More than 30 minutes but less than 40 minutes

Use the graph below to answer the question.

21. A student store sold a total of 55 shirts for \$620. The shirts sold were either red or white. If the red shirts sold for \$12 each and the white sold for \$10 each, how many of each color shirt were sold?

- (a) 20 red, 35 white
 (b) 27 red, 28 white
 (c) 28 red, 27 white
 (d) 35 red, 20 white

22. Consider each system of equations below. Just by looking at the equations, tell how many solutions the system will have and explain why. **NOT MULTIPLE CHOICE!**

a.
$$\begin{cases} y = 4x - 3 \\ y = 4x + 2 \end{cases}$$

b.
$$\begin{cases} y = \frac{1}{3}x + 5 \\ y = \frac{1}{3}x + 5 \end{cases}$$

c.
$$\begin{cases} y = -x + 2 \\ y = \frac{1}{3}x + 6 \end{cases}$$

d.
$$\begin{cases} y = -\frac{3}{4}x + 5 \\ y = -\frac{3}{4}x - 4 \end{cases}$$
